什麼是資料論文 (data paper) ?

描述資料集、會經過

同儕審查 (peer review) 的文章

發表 data paper 的好處

- 增加資料集的曝光度，增加被使用與引用率
- 有機會提高資料品質 (同儕審查)
- 和研究論文比，相對快速與容易發表
- 可以更仔細的描述資料集

發表資料論文的優點

不論你/妳是..

研究人員

- 增加研究的引用
- 提高學術貢獻度

學生

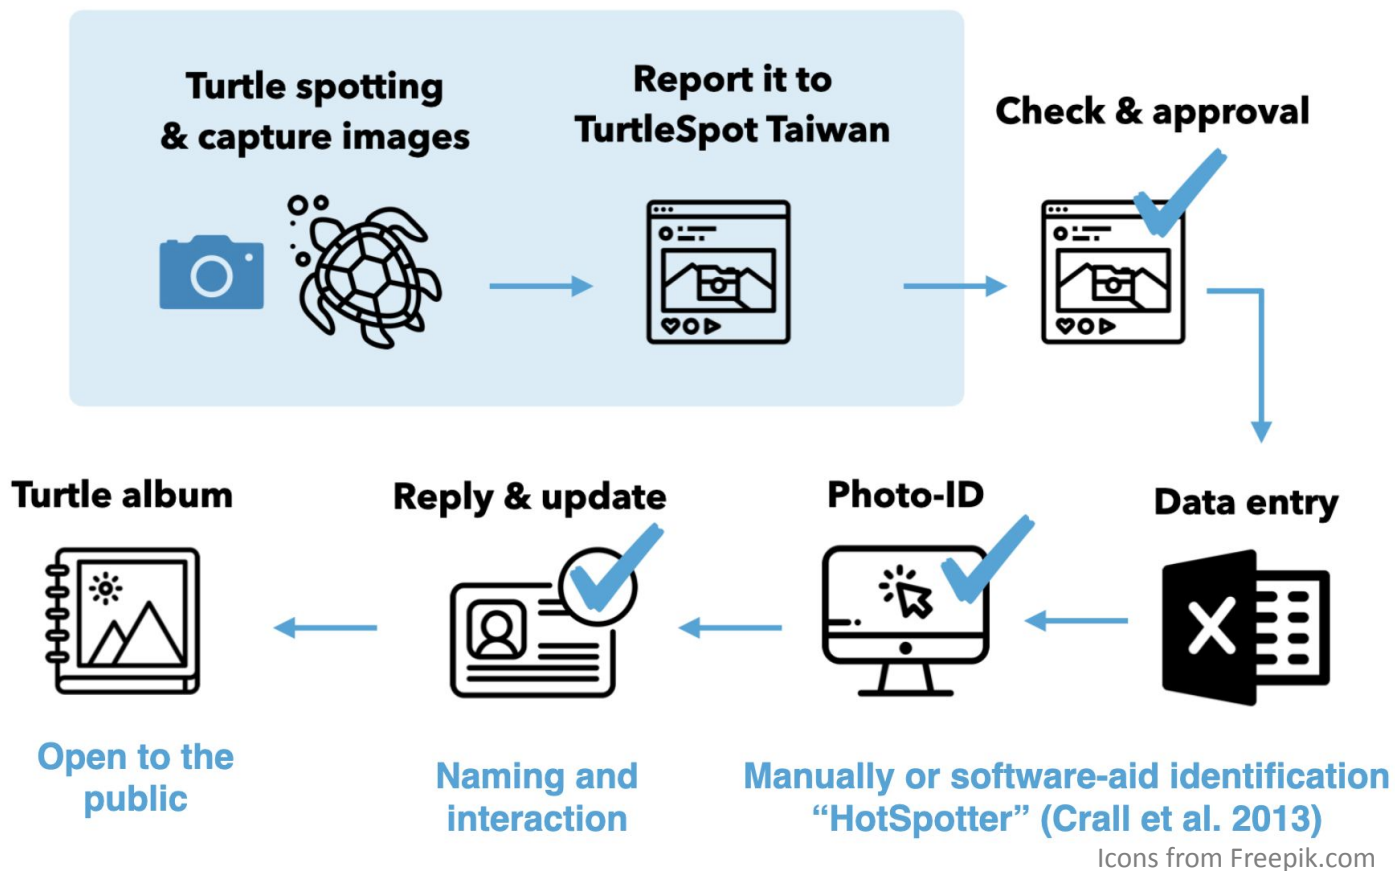

- 發表資料論文只需要方法和結果，包括原始數據
- 資料被保存並容易找到
- 可在未來重複使用

NGO組織

- 提高組織曝光度
- 從工作中得到信譽
- 留下生物多樣性保護的參考資料

重要: 可以比 metadata 還更仔細描述收集、處理、清理資料等的方法

進階版: 甚至可以建議其他人可以怎麼應用你的資料

data paper 架構

- 資料集的描述
- 不需寫假說和討論

data paper

- ▼ Article metadata

Focus and Scope

Biodiversity Data Journal (BDJ) is a community peer-reviewed, open access, comprehensive online platform, designed to accelerate publishing, dissemination and sharing of biodiversity-related data of any kind. All structural elements of the articles – text, morphological descriptions, occurrences, data tables etc. – will be treated and stored as data, in accordance with the [Data Publishing Policies and Guidelines of Pensoft Publishers](#).

The journal will publish papers in biodiversity science containing taxonomic, floristic/faunistic, morphological, genomic, phylogenetic, ecological or environmental data on any taxon of any geological era from any part of the world with **no lower or upper** limit to manuscript size. For example:

- single taxon treatments and nomenclatural acts (e.g., new taxa, new taxon names, new synonyms, changes in taxonomic status, re-descriptions, etc.);
- data papers describing biodiversity-related databases, including ecological and environmental data;
- sampling reports, local observations or occasional inventories, if these contain novel data;
- local or regional checklists and inventories;
- habitat-based checklists and inventories;
- ecological and biological observations of species and communities;
- any kind of identification keys, from conventional dichotomous to multi-access interactive online keys;
- descriptions of biodiversity-related software tools.

包括但不限於：

- 新物種或物種改學名
- 新相關的資料庫
- 新名錄 (地區性、棲息地等)
- 新觀察現象
- 新相關軟體/工具

OCCURRENCE

Sea turtle sightings in Taiwan | 台灣海龜目擊紀錄

Latest version published by TurtleSpot Taiwan 海龜點點名 on 03 August 2022

Edit

[Data paper under review - Preprint <https://preprints.arphahub.com/article/90210/>] We describe a dataset of sea turtle sightings around the coast of Taiwan and its islands. The data was collected by citizen scientists and reported to TurtleSpot Taiwan, a citizen science initiative that collects sea turtle sighting data mainly through the Facebook group (<https://www.facebook.com/groups/turtlespotintw>). This dataset includes 3,515 sighting data dated from March 2010, except most of the data (n=3,128; 89%) falls were between June 2017 to December 2021. A standardized format of basic sighting information was suggested to anyone who wishes to report the occurrence. We also request photos and videos for turtle species identification and to record any physical abnormality. In addition to the b... [More](#)

The screenshot shows the GBIF dataset page for 'Sea turtle sightings in Taiwan | 台灣海龜目擊紀錄'. The page is in Chinese and includes a navigation bar with links for 'Get data', 'How-to', 'Tools', 'Community', and 'About'. The dataset is registered on June 28, 2022, and is published by TurtleSpot Taiwan (海龜點點名) by Hoh D • Fong C. The dataset has 3,515 occurrences and 3 citations. A 'DOWNLOAD' button is highlighted with a red box, and a dropdown menu is open, showing options for 'GBIF annotated archive Recommended', 'Source archive Darwin Core Archive', and 'GBIF annotated metadata EML', with the 'EML' option also highlighted. The page includes a description of the dataset, a project ID, publication date, metadata last modified date, host (Taiwan Biodiversity Information Facility), and license (CC BY 4.0). At the bottom, there are four progress indicators: 3,515 Occurrences (100%), 100% With taxon match, 99.9% With coordinates, and 99.9% With year.

如果 metadata 有填，這裡會自動輸入

Background

[Data paper under review - Preprint <https://preprints.arphahub.com/article/90210/>] We describe around the coast of Taiwan and its islands. The data was collected by citizen scientists and preprint science initiative that collects sea turtle sighting data mainly through (https://www.facebook.com/groups/turtlespotintw). This dataset includes 3,515 sighting data and the data (n=3,128; 89%) falls were between June 2017 to December 2021. A standardized form suggested to anyone who wishes to report the occurrence. We also request photos and videos to record any physical abnormality. In addition to the basic data often associated with an occurrence, sea turtle up to the individual level using the Photo ID method. Hence, if a good quality photo is available, the sighted individual can be identified and given a unique Turtle ID. In total, 762 turtles, comprising 723 green, 38 hawksbill, and 1 olive ridley turtles. The data of TurtleSpot includes observations of sea turtles in the wild, such as witnessing the recovery of some injured turtles, interactions, and physical abnormality. These data will offer essential information that helps to understand turtles and assists in the development of conservation measures. The purpose for preparing this report is: (1) to give back to our community since most of these data were their contributions, (2) to advance turtle foraging ecology in Taiwan (Fong et al., in prep), and (3) to publicly open the data for advanced conservation communities.

Introduction

PLEASE WRITE YOUR INTRODUCTION HERE

Project description

Title: Sea turtle sightings in Taiwan | 台灣海龜目擊紀錄

Personnel: Daphne Hoh, Chia-Ling Fong, Huai Su, Pengyu Chen, Chia-Chen Tsai

Sampling methods

Study extent: We collect reports of all sea turtle sightings from any region, but our current focus is on the sighting data around the coasts of Taiwan and its islands.

Sampling description: More than half (n=2,235; 63.6%) of the data was provided by citizen scientists. The remaining data (n=1,280) was personal records contributed by two of the co-authors.

Quality control: Each sighting reported in TurtleSpot's Facebook group was first checked by the group admin for the required information pending approval. The required information includes sighting date, time, location (and dive site), depth, method, and for species and individual identification - high-quality photos and videos containing the whole body, left, and right faces of the sighted turtle. The sighting provider will be requested to provide any of the missing information unless unavailable.

Step description: Receive data: We receive sea turtle sighting reports contributed by citizen scientists via our Facebook group (<https://www.facebook.com/groups/turtlespotintw>).

Approve report: Facebook post of a sighting report which followed our reporting format and passed the quality check by the group admin was approved to be visible in the Facebook group, allowing community interaction within the post.

Record data: Sighting information contained in the report was recorded in Google Sheets as raw data. These raw data (mostly in Chinese) were translated into English.

Edit: Abstract & Keywords

Background*

B | *I* | U | \times_e | \times^2 | $\frac{1}{x}$ | $\frac{1}{x^2}$ | $\frac{1}{x^3}$ | Ω | ∞ | \int | \sum | ABC | \leftarrow | \rightarrow | Fig | Tab | Ref | Suppl | Endnote |

We describe a dataset of sea turtle sightings around the coast of Taiwan and its islands. The data was collected by citizen scientists and reported to TurtleSpot Taiwan, a citizen science initiative that collects sea turtle sighting data mainly through the [Facebook group](#). This dataset includes 3,515 sighting data dated from March 2010, except most of the data (n=3,128; 89%) falls were between June 2017 to December 2021. A standardized format of basic sighting information was suggested to anyone who wishes to report the occurrence. We also request photos and videos for turtle species identification and to record any physical abnormality. In addition to the basic data often associated with an occurrence, TurtleSpot aims to identify each sea turtle up to the individual level using the Photo ID method. Hence, if a good quality photo of left- and right-facial scutes were available, the sighted individual can be identified and given a unique Turtle ID. In total, 762 turtle individuals were assigned a turtle ID, comprising 723 green, 38 hawksbill, and 1 olive ridley turtles. The data of TurtleSpot Taiwan has allowed some ecological observations of sea turtles in the wild, such as witnessing the recovery of some that helps to understand the foragi

New information* 

B | *I* | U | \times_e | \times^2 | $\frac{1}{x}$ | $\frac{1}{x^2}$ | $\frac{1}{x^3}$ | Ω | ∞ | \int | \sum | ABC | \leftarrow | \rightarrow | Fig | Tab | Ref | Suppl | Endnote |

This dataset contains 3,515 occurrence records of sea turtles and is currently the largest public dataset of sea turtle sighting records in Taiwan. Post-publication of this dataset to the Global Biodiversity Information Facility ([GBIF](#)) demonstrated that the number of green sea turtle *Chelonia mydas* occurrence records is few of the top in the world. The data served as the foundation for understanding sea turtle ecology in Taiwan's coastal waters.

Data resources

Data package title: Sea turtle sightings in Taiwan

Resource link: <https://www.gbif.org/dataset/336b6790-062f-407f-a783-2f1d8874e6c3>

Number of data sets: 1

Data set name: Sea turtle sightings in Taiwan

Data format: Darwin Core Archive

Data format version: 2021-07-15

Description: Data fields were standardised to 46 Darwin Core terms as listed in the following table. The column label and some of the description are written as listed in the [List of Darwin Core terms](#) (accessed June 2022; created by the TDWG Darwin Core Maintenance Group). A more specific description about the column used in the current dataset was also added if applicable.

Column label	Column description
occurrenceID	An identifier for the Occurrence (as opposed to a particular digital record of the occurrence).
catalogNumber	An identifier unique for the record within the dataset.
rightsHolder	A person or organization owning or managing rights over the resource.
recordedBy	Names of the sighting reporter/citizen scientist.
year	The four-digit year in which the Event occurred, according to the Common Era Calendar. Year of sighting.
month	The integer month in which the Event occurred. Month of sighting.
day	The integer day of the month on which the Event occurred. Day of sighting.
eventDate	Sighting date.
eventTime	The time or interval during which an Event occurred.
country	The name of the country in which the Location occurs.

alpha writing tool 的好 & 壞處

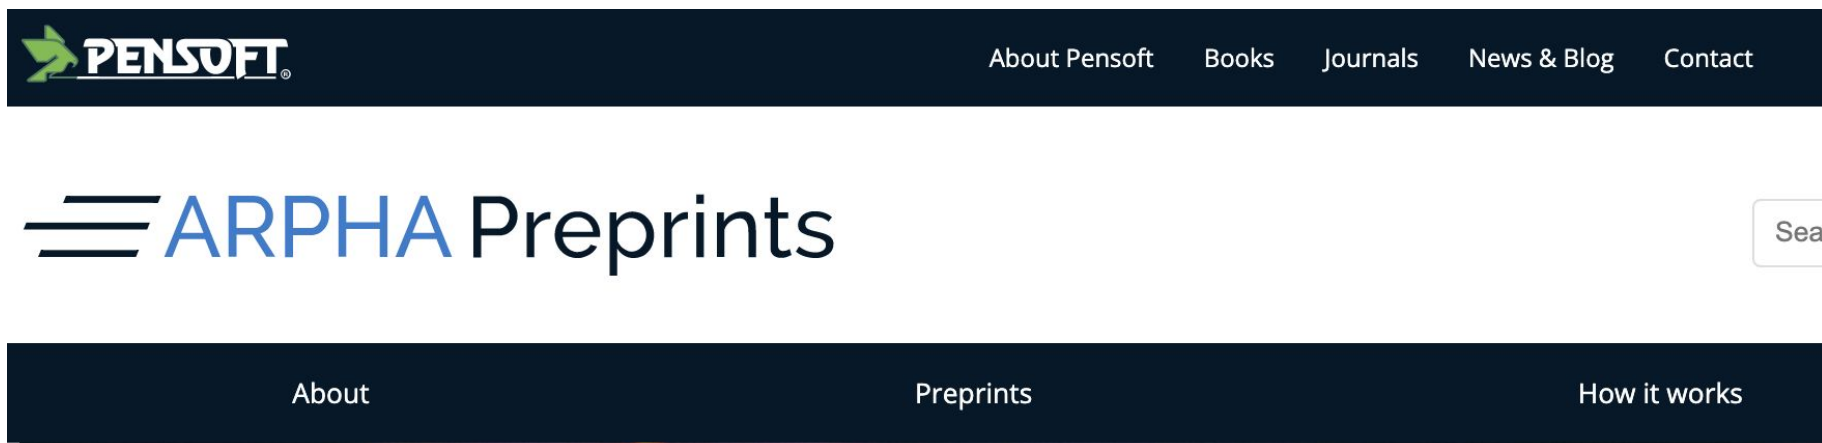

GOOD

- 有提供建議的 section 適合 data paper 新手
- 有跟 GBIF 合作所以使用 EML 直接上傳很方便
- 投稿過程很簡單

BAD

- 有時候操作很卡
- 作者們共同協作算方便但一次只有一個人能操作
- 有些功能還沒有很完善

Preprints 預印本

Pensoft ARPHA Preprint <https://preprints.arphahub.com/>

- Preprint 是還未被同濟審查的完整草稿的論文
- 相較傳統學術論文可以更快速出版研究成果供大家閱讀
- 免費開放、而且有 DOI 是可以被引用的
- 好東西就是要快點被看到
